

# **PoE switch disconnects under full load**

## Overview

---

Firmware Updates: Ensure the switch firmware is up-to-date to fix any known issues. When a problem occurs with PoE, in most cases, the error symptom can be simply shown as the PoE switch not providing power, and the powered devices will stop working. The cause of failure may be attributed to many factors, including hardware device factors and software factors. Cisco recommends that you have knowledge of these topics: • Catalyst 9000 Series switches • Power over Ethernet This document is not restricted to specific software and hardware. Fluke Networks LinkIQ Cable + Network Tester has the ability to receive discovery protocol packets from a switch for a given link and place a load on the connection to ensure that the advertised power is actually what is being delivered across the cabling to the device.
