

PoE switches are prone to disconnection

Overview

Check PoE Budget: Ensure the PoE switch or injector has enough power budget to support all connected devices. In a basic PoE power supply system, the major components are the power sourcing equipment (PSE), the powered device (PD), and the PoE cables. Cisco Catalyst switches, including the widely deployed 9300 and 2960 series, support multiple PoE standards enabling devices like IP phones, wireless access points, and security cameras to operate without dedicated power sources. Using PoE power has a lot of benefits: Lower bill-of-materials costs because there is no need for a wall adapter or local power supply, nor is there a need for professional.
