

Price Increases in Fiber Optic Cables in Europe and the United States

Overview

China's benchmark fiber optic price has surged over 400% since May 2025, hitting a new all-time high. This executive briefing on trade (EBOT) will examine the relationship between fiber optic cable input costs, specifically silica tetrachloride, helium, and energy, and the demand forces that have increased the price of fiber optic cable. From late 2025 into 2026, global fibre optic prices have increased sharply and across the board — standard single-mode, bend-insensitive grades, and in turn pre-terminated assemblies, patch leads, and bulk cable. The causes are structural, they are not going away quickly, and understanding what is. The price rally has expanded to Europe and the US, with prices for some fiber types rising over 130%. At the FTTH Council Conference in Madrid in 2023, operators and investors focused on their new reality of the high number of small alternative networks rolling out fiber as investors become more selective and funding costs grow.
