Overview

Choose the right box based on environment (indoor/outdoor), load capacity, and durability. It takes the incoming power and safely distributes it to different circuits throughout your building. The three live wires should be connected to the upper entry of the main switch in the explosion-proof distribution box, and the neutral wire should be directly connected to the neutral terminal bar without a fuse. Proper grounding through earth bars is essential for electrical safety, while neutral bars complete the electrical circuit back to the source.
