

Protection of the inlet of the secondary distribution box

Overview

6 The distribution cabinet, table, and box should be connected with each other or with the foundation steel with galvanized bolts, and the anti-loose parts should be complete; when the design has fire protection requirements, the inlet and outlet of the cabinet . Primary distribution systems consist of feeders that deliver power from distribution substations to distribution transformers. This includes the rear wall, side panels, doors, door handle and ventilation grille with climate filter for the air intake.
