

Requirements for wire bends in distribution boxes

Overview

6 (A) provides minimum wire-bending space dimensions at terminals and minimum width of wiring gutters. When installing insulated conductors of 4 AWG or larger, the minimum dimensions of pull or junction boxes installed in a raceway or cable run must comply with 314. What is the requirement for a single cable to be tied to an existing ceiling stringer at the cable drop location?

What are. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. A uniform telecommunications grounding and bonding infrastructure shall be provided for the protection of personnel and equipment conforming to all applicable codes and standards including but not limited to the current National Electric Code (NEC) Articles 250 (Grounding and Bonding) and Chapter 8. These limits should not be used for cables subject to a sharper bend than a shielded cable.
