

Safe distance between distribution boxes and high low voltage cabinets

Overview

The distance between distribution boxes should not be too far; the distance between the distribution box and the switch box should not exceed 30m. Dedicated space: The space equal to the width and depth of electrical equipment in addition to the space extending from the floor to 6 feet above the equipment or structural ceiling. The International Standards of Practice for Inspecting Commercial Properties (ComSOP) states that the inspector. The conductors and equipment required or permitted by this subpart shall be acceptable only if approved, as defined in § 1910.
