

Slow switching speed using KVM switcher on Windows 7

Overview

Avoid the 'Refresh Rate Trap' by ensuring your KVM supports the full bandwidth of your 240Hz+ monitor. I have a 2 port Startech KVM switch (SV211HDUA4K) when we attempt to switch between computer 1 to computer 2 and vice versa it takes about 8-10 seconds to load the other computer. Now I know this isn't a huge deal, but I have been asked to look and see if there is any way I can speed this up. Input Processing Time: How quickly the KVM switch can process the signals from the mouse and keyboard to the PC. I assume that the delay to display is being caused by the HDMI handshaking to complete. This is super useful for people who have more than one computer but don't want the hassle of switching between different keyboards and mice.

Slow switching speed using KVM switcher on Windows 7

Screen blinks/flashs while switching monitor due to KVM + DP

Switch monitor on Monitor detects DP immediately and shows it The KVM is a bit slow in general and a few seconds later it connects the monitor with the PC via HDMI. HDMI has some

PC slow network via switch

Windows 10 pc. Plugged into 5-port switch (Phone & Printer shared). Network speed was normal. Today it is horribly slow. Speedtest is .08. Replaced switch, unplugged phone and printer,
