

Speed of Telecom Fiber Optic Cable Leased Line

Overview

A fiber optic leased line can deliver speeds ranging from 10Mbps to 10Gbps or higher. An ONT (Optical Network Terminal) converts optical signals to electrical signals when fibre optic cables are used. In contrast to most fibre broadband connections, subscribers are likely to get a Service Level Agreement guaranteeing performance, faster physical fault fixing and 24/7 support. A Leased Line, also known as a private circuit, is a dedicated telecommunications line that provides a permanent, private connection between two locations.
