

Surge protector distribution box grounding

Overview

Follow these steps to check and fix your grounding: Put unprotected and protected wires in different pipes. However, the protection provided depends crucially on the quality of the installation - the best surge protection device is of no use if incorrectly installed. Improperly installed devices will not perform as intended and consequently, will not protect the equipment. Power spikes are a short duration (milliseconds) power disturbance of very high voltage levels (above 1000 V). Surge protection in main power distributions. Incorrectly installed surge protection poses a liability risk for planners and installers of switching devices. When a lightning surge or other electrical event occurs, the SPD limits the overvoltage to safe levels and diverts surge current safely to ground.
