

Temporary power distribution box door grounding wire

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. If you've ever found yourself scratching your head over whether that metal door on your distribution cabinet really needs a grounding wire, you're not alone. In factories, construction sites, and even commercial buildings, this question pops up all the time. However, exposure to weather, frequent relocation, rough use and other conditions not normally encountered with conventional wiring systems necessitate special consideration not required in other applications or in completed structures. Below procedure will help you to establish a safe standard for the installation of temporary and permanent electrical fixtures/appliances on project sites.
