

The control busbar is a secondary device

Overview

They are essentially conductive strips, bars, or bus tubes that carry and distribute large amounts of electrical current from one part of the control panel to various circuit breakers, fuses, or other connected devices. Busbar provides engineers, integrators, and OEMs with similar benefits as IEC devices. Busbars (bus bars) are a type of electrical conductor that, compared to traditional cables, allow for the transmission of current in a safer and more flexible manner. An electrical busbar ("bus bar" or "buss bar") is a heavy-duty conductor, typically a metallic bar or strip, that carries high currents within electrical equipment.
