

The electrical box was crackling and popping

LoRa handheld portable base station

Overview

Popping or crackling electrical sounds indicate arcing, loose wiring, or failing components. The noise that you hear is electrical current struggling to flow and intermittently making contact, jumping tiny air gaps causing arcing. While some cases are relatively minor, others indicate serious fire or shock hazards that require immediate attention. This guide explains what causes the popping, what the warning signs are, and how to.

The electrical box was crackling and popping
