

The ground where the distribution box is installed is uneven

Equipped with a removable **Mounting Plate** inside the enclosure, enabling customized drilling and secure component mounting.

Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). **Safety of Personnel:** By safely channeling fault currents into the ground, proper grounding helps to reduce the risk of electric shock to personnel. This helps to reduce the potential difference that exists between conductive parts and the earth. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used.

Preparation: First, you need to prepare some necessary tools, including grounding wire, grounding rod, voltmeter, insulating gloves and insulating tools.
