

The role of optical modules for 100Mbps and 1Gbps speeds

Overview

When it comes to high-speed data transmission, optical modules play a crucial role in ensuring the seamless transfer of information across networks. These modules serve as the interface for converting electrical signals into optical signals for transmission over fiber optic cables. A gigabit SFP module is a hot-pluggable transceiver designed to deliver 1Gbps Ethernet connectivity over fiber or copper, and it remains one of the most widely deployed networking components in enterprise, campus, and industrial networks today. 5G SFP Skip to content Search 800G Modules New Arrival!
