

The router has poor signal when placed in the fiber optic box

Overview

The signal might become weaker, resulting in slower speeds or dropped connections. Use an Optical Time Domain Reflectometer (OTDR) to identify where the signal loss occurs. This guide will walk you through diagnosing and resolving common fiber network issues efficiently. Your high-speed internet connection may not perform at its best if the router isn't positioned in the right spot. Also, each mesh router does not recognize the other unless they are placed practically next to each other. When the signal quality degrades, it could be a sign of attenuation or excessive loss in the system.
