

Tube-type busbar copper

Overview

A Copper Tubular Busbar is a high-performance electrical busbar made from copper in a tubular form, designed to efficiently conduct electricity with minimal resistance. In this new edition the calculation of current-carrying capacity has been greatly simplified by the provision of exact formulae for some common busbar configurations and graphical methods for others. Due to their exceptional conductivity and durability, they are widely used in industrial electrical systems and electronic devices. We offer complete systems made of copper or aluminium in air- or water cooled performance. Contact our team on 01384 404 488 or simply email your requirements to sales@alcomet.
