In the manufacturing process of metal distribution boxes, welding constitutes a critical stage following sheet metal cutting and bending. We have a W12 x 190 with 4 x 13/16" bolt holes that our Peddinghaus drill line "mysteriously" drilled 1" offset from where they should be. Whether it's a rusted-out section of a car frame, an accidental drill hole, or a worn-out part of machinery, welding provides a durable and long-lasting fix. Rust eats away at the metal thickness until you're left with weak, thin spots that blow through the second you strike an arc — especially if you're using too much.
