

# **What are network chassis and server racks**

## Overview

---

While data center racks are primarily responsible for organizing and housing multiple servers and networking equipment, chassis focus on enclosing and protecting individual server components. Racks come in open (rack) or closed (cabinet) designs: Open racks → better airflow, easier maintenance. Choosing between a server rack and a network rack defines the performance, scalability, and safety of your IT infrastructure. Server racks and cabinets are designed to hold servers and other critical IT equipment, such as storage arrays and network switches. Its purpose is to provide structural support, protect sensitive electronics from physical damage and environmental.
