

What is optical fiber measurement

Overview

Fiber measurement is the assessment of fiber properties like length, diameter, strength, elongation, crimp, and moisture content to determine the quality and suitability of fiber. Fiber optic measurement is the process of evaluating the optical and physical properties of fiber optic systems to ensure their performance aligns with desired standards. An optical fiber, or optical fibre, is a flexible glass or plastic fiber that can transmit light from one end to the other. To measure something means to observe its characteristics and compare it to some standard "unit" of measurement.
