

# What items are included with optical fiber cables

## Overview

---

A fiber optic cable consists of five basic components: the core, the cladding, the coating, the strengthening fibers, and the cable jacket. Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic interference, fiber optic cables offer unparalleled performance and can cover much greater distances without bumping up against signal degradation. What are Fiber Optics Cables Used For?

Fiber optic cables (also known as optical fiber cable) are network cables that contain many strands.
