

What size wire should be used in a construction site distribution box

Overview

Use high-temperature resistant copper core wire, and the cross-sectional area should meet the load current requirements. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. The fixing method should be firm and reliable to avoid movement or tilting of the box due to vibration or collision. Underground wire sizing is very different from indoor runs, as underground circuits tend to run much longer, which makes voltage drop a major concern.
