

What size wire should the control cabinet be equipped with and how should it be configured

Overview

How do you need to design control circuit wires to comply with UL 508A?

The wire size for control cables within the control panel must be a minimum of 18 AWG, with the exception of control cables for PLC inputs/outputs. Electrical control panel wiring should be organized well or it can be unsafe or even hazardous. Much of the requirements have to do with control circuit conductor protection, against both overcurrent and short circuit, and the type of wires used inside and outside of a control enclosure. This article summarizes what this author believes are some best practice when it comes to control panel layout and wiring.
