

What type of pigtail is used for fusion splicing single-mode optical fiber

Overview

Fiber optic pigtail offers an optimal way to joint optical fiber, which is used in 99% of single-mode applications. This post contains some basic knowledge of fiber optic pigtail, including pigtail connector types, fiber pigtail classifications, and fiber pigtail splicing methods. The connector end is polished and tested under factory conditions, ensuring low insertion loss and high return loss. A fiber pigtail is a single, short, usually tight-buffered fiber optic cable with a factory-installed connector on one end, and un-terminated fiber on the other end. Compared with quick termination or epoxy and polish connections placed on the field. Fiber optic fusion splicing is on the rise and Corning's Pigtailed Splice Cassettes enable faster field splicing and easy modular management of connectorization within the housing.
