In other words, it is the limit in bytes of information that can travel in a single digital "package." By default, many routers come configured with an MTU of 1500 bytes. This may work well

How to Choose Optimal MTU Settings for Network

For instance, if a switch (MTU 1500) connects to a router (MTU 1400), set the switch's MTU to 1400 or less. If not, the router fragments packets larger than 1400 bytes. Alternatively,

Adjust Your Router's MTU Settings for Optimal Network
